

- 1) How do the motivations and objectives of threat actor types, such as nation-state actors, cybercriminals, and hacktivists, differ when it comes to conducting cyberattacks?

Answer: They all have different motivations and objectives. Hacktivists usually have a movement they are following and hack for group social issues whereas cybercriminals are more likely to be motivated by financial gain. Nation-state actors are usually funded by a government to carry out APT style attacks.

- 2) What are some effective strategies and technologies organizations can employ to mitigate the risks associated with diverse threat actor types and evolving attack vectors in today's cybersecurity landscape?

Answer: Organizations could use Threat research as a measure of counterintelligence. This will allow security of companies to discover the Tactics, techniques, and procedures of modern cyber adversaries.
