

What is the purpose of an Active Directory trust relationship, and how does it enable collaboration between domains or forests?

**Answer: They allow users in one domain to access resources in one another.**

What are Group Policy Objects (GPOs) in Active Directory, and how do they control user and computer configurations? Can you provide an example of a GPO setting and its impact on client computers?

**Answer: A collection of Group Policy settings that defines what a system will look like and how it will behave for a defined group of users. An example is Settings a group policy for Role Based access.**

Active Directory relies on domain controllers. Explain what a domain controller is, its role within a domain, and how multiple domain controllers collaborate to ensure availability and fault tolerance.

**Answer: The role of domain controllers is to manage trust among the domains by granting access to users from one domain to the other via a proper security authentication process.**
